

Travel Risk Assessment Module

Our risk assessment tool captures, reviews and auto-approves.

Risk assessments identify high-risk situations and determine prevention and mitigation actions that can reduce the risk.

At SafetyIQ, we have transformed the way risk assessments are administered, saving companies 1000s of hours in productivity improvements, completely removing paper forms and generating an auditable trail.

- Identify and focus on high risk situations
- Mitigate fatigue related incidents
- Reduce manual approval processes
- Customise to meet your specific needs

Avg. Saved Per Month

“We were looking for a competitive advantage when it came to implementing SafetyIQ and what we found was a 70% cost reduction straight-away and achieved higher compliance and safety improvements within that process.”

— Marco Waanders, GM of Camp Management

How it Works

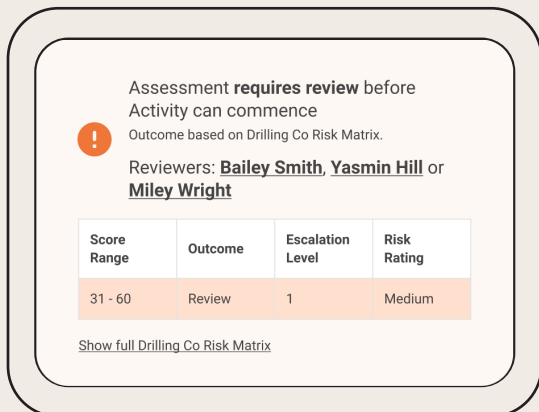

1

Self-Managed Activities

Users complete a Risk Assessment before embarking on their Activity allowing ample time for Managers to intervene if a high risk response is submitted.

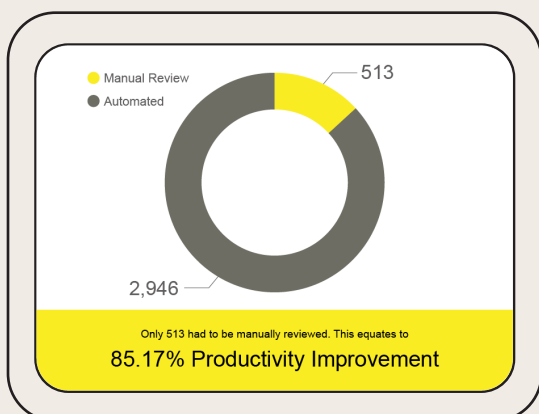

2

Monitoring Activities

The Risk Assessment scores against a Risk Matrix to automatically approve low risk responses, allowing Managers to focus on high and medium risk responses.

3

Dashboards & Analytics

Review the breakdown of automated and manual Risk Assessments to assess the productivity savings.
