

Safer Journeys, Managed in Real Time

Real-time visibility into every trip, with automated risk assessments, check-ins, and escalations that get mobile and remote workers home safely, every time.

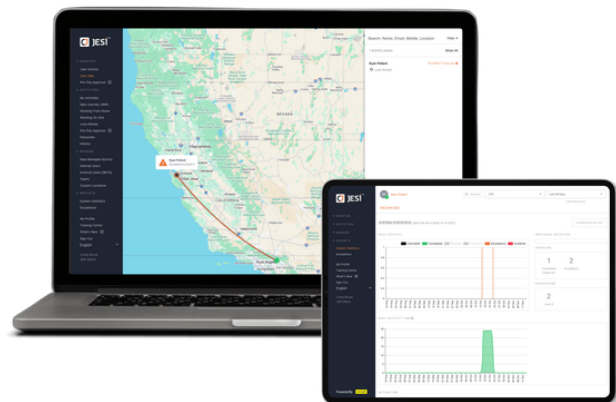

SafetyIQ Journey Management

Any time an employee travels for work — across town, across a site, or across remote terrain — an organization takes on a duty of care it must actively manage, not just document after the fact. SafetyIQ's Journey Management software turns that duty of care into a structured, automated system: employees plan and log journeys before departing, check in at key waypoints, and are automatically escalated to safety teams the moment a check-in is missed or a risk threshold is crossed.

SafetyIQ's Journey Management solution connects field workers, supervisors, and safety leaders in one live view — a centralized map with GPS, satellite, and IVMS integration — so nothing falls through the cracks between "trip planned" and "trip complete." The result is fewer manual admin hours, faster emergency response, and an auditable record that proves compliance rather than just claiming it.

For safety teams, that shift changes everything: instead of chasing down drivers by phone or piecing together what happened after an incident, they can see risk building in real time and step in before a trip becomes a crisis.

> Key Features

Journey Dashboard

A single live view of every worker, route, status, and escalation – no toggling between systems to know who's safe.

Automated Alerts

Missed check-ins trigger instant, automated escalations to the right people – replacing manual chase-ups.

Safety Risk Scoring

Every journey is scored against a configurable risk matrix and auto-routed to approved, under review, or denied.

GPS & IVMS Integration

Live telematics flag harsh braking, rollovers, and speeding the moment they happen, not after the fact.

Pre-Departure Assessments

Structured risk assessments before every trip create an auditable record of due diligence.

Configurable Escalations

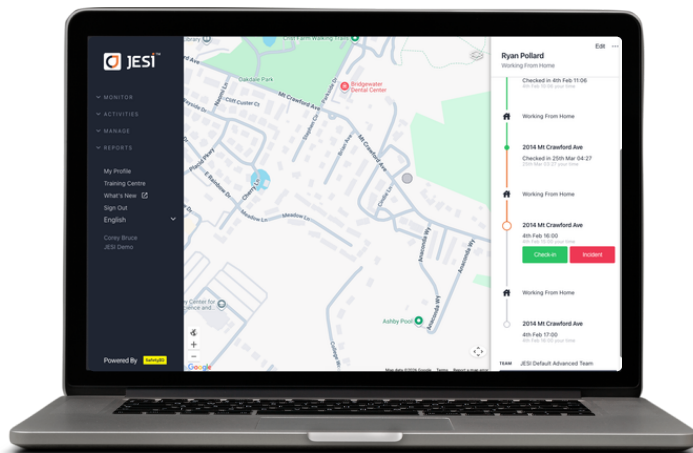

Live telematics flag harsh braking, rollovers, and speeding the moment they happen, not after the fact.

Offline & Mobile Capability

Full functionality with no signal – journeys sync automatically the moment connectivity returns.

Reporting & Analytics

Journey logs, escalation history, and travel trends in one place to continuously refine safety procedures.

Why Safe Journeys Matter

39%

of all occupational fatalities in the U.S. are transportation-related

1 in 4

workplace road fatalities occur while an employee is driving or riding for work

\$72B

in annual employer cost from on- and off-the-job motor vehicle crash injuries

Data from OSHA, NETS, Towards Zero NSW
